SUMMARY

Results-driven Data Engineer and M.Sc. Data Science candidate (University of Koblenz) with proven impact at **Think3DDD GbR** - architecting AWS automated ETL pipelines that consolidate logistics data from **20 global plants** and building **AWS QuickSight** dashboards and **Power BI** reporting systems adopted across 3 departments, saving ~8 manual hours per cycle. Brings production-grade cloud engineering (AWS Glue, Lambda, Athena, QuickSight), enterprise BI (Power BI, DAX), and ML-driven automation that German automotive, tech, consulting, and scale-up teams can deploy immediately. Applied machine learning practitioner with experience building end-to-end predictive pipelines for forecasting, anomaly detection, and operational decision support.

SKILLS

Programming	Python (Pandas, NumPy, Scikit-learn, PyTorch), SQL, VBA, Advanced Excel(macros)
Data Engineering & Cloud	AWS (S3, Glue, Lambda, Athena, Redshift), ETL/ELT Design, Schema standardization, REST APIs, Data Ingestion, Data Transformation, Data Modeling, Data Warehousing, Query Optimization
BI & Reporting	Power BI(DAX Power Query), AWS QuickSight, Tableau, KPI Automation, Dashboard Design
Database	Athena, PostgreSQL, MySQL, MSSQL, BigQuery
DevOps Tools	Workflow Orchestration, Reporting Automation, Power Automate, Power Apps, SharePoint
Machine Learning	Regression, Random Forest, XGBoost, ARIMA, Prophet, anomaly detection, Isolation Forest Feature Engineering
Tools	Git, GitLab, GitHub, Docker, n8n, Microsoft

EXPERIENCE

Data Analyst & Automation Intern

March 2026 – Present

Think3DDD GbR | Berlin, Germany

- ▶ Architected end-to-end AWS ETL/ELT pipelines (S3 → Glue → Athena → QuickSight) ingesting multi-source logistics data from **20 global plants**, cutting data latency by ~40% and establishing a single, auditable source of truth consumed by 15+ international stakeholders.
- ▶ **Sole owner of the AWS QuickSight dashboard suite at Think3DDD GbR** — designed, built, and maintained **10+ executive and operational dashboards** on centralised data layers, delivering real-time KPI tracking, exception alerting, and logistics performance monitoring for 15+ stakeholders across 3 departments within the first month of go-live.
- ▶ Re-engineered legacy Excel/VBA reporting processes into scalable **cloud-based pipelines**, saving **8 hours** of manual effort per reporting cycle and eliminating class-1 data inconsistency errors.
- ▶ **Owned and maintained the production Power BI reporting environment at Think3DDD GbR** — optimised DAX measures, Power Query transformations, Power Automate refresh flows, and SharePoint integration, reducing end-to-end reporting cycle time by **30%** and enabling same-day data visibility for logistics managers across 20 plants.
- ▶ Built Python and SQL data-quality validation frameworks enforcing schema standards across 12+ ingestion feeds, improving downstream data reliability from ~82% to >97% conformance.

Data Scientist

Jan 2024 – June 2025

RiseAscend Technologies | Ahmedabad , India

- ▶ Built Python/SQL transformation pipelines converting raw transactional datasets into analytics-ready KPI layers, reducing business reporting prep time by **20%** for a team of 8 analysts.
- ▶ Developed interactive Power BI dashboards with automated scheduled refresh, consolidating 6 manual Excel reports into a single self-service BI portal.
- ▶ Profiled and cleansed 500K+ row transactional datasets using Pandas EDA workflows, detecting 3 critical anomaly clusters that prevented erroneous business decisions.
- ▶ Redesigned relational data models and optimised 15+ complex SQL queries, cutting average dashboard load time from 45s to under 10s.

RiseAscend Technologies | Ahmedabad, India

- ▶ Designed automated Python/SQL data preparation workflows processing large transactional datasets for Power BI and Tableau dashboards used by 20+ business stakeholders.
- ▶ Built end-to-end reporting pipelines reducing near-real-time KPI visibility lag from 24 hours to under 2 hours through optimised incremental data loads.
- ▶ Implemented anomaly detection and automated data validation, reducing dashboard error reports by **35%** over a 6-month period.
- ▶ Optimised SQL queries and relational models, achieving a **50%** reduction in dashboard refresh time on critical operational reports.

PROJECTS

AI-Driven Sales Forecasting Pipeline | Python · ARIMA · Prophet · Power BI

- ▶ Engineered end-to-end forecasting pipeline (ingest → clean → model → visualise) using ARIMA and Facebook Prophet; achieved RMSE **12% below baseline** across an 18-month validation window.
- ▶ Built automated feature engineering and anomaly detection that flagged irregular sales patterns **48 hours earlier** than prior manual review, enabling proactive inventory decisions.
- ▶ Delivered Power BI dashboard with DAX measures visualising actual vs. predicted demand — reduced weekly forecasting review meeting from 90 min to 20 min.

Predictive Maintenance — Industrial Vehicles | Scikit-learn · XGBoost · Random Forest · Tableau

- ▶ Designed ML pipeline on IoT sensor time-series data; XGBoost model achieved **91% precision** predicting component failure **72 hours before occurrence**, enabling just-in-time maintenance scheduling.
- ▶ Reduced feature engineering time by **60%** via automated preprocessing workflows, cutting model re-training cycle from 4 hours to under 90 minutes.
- ▶ Deployed model via REST API (FastAPI) and integrated with dashboard for real-time predictions. Built Tableau operational dashboard monitoring vehicle health indicators and predicted maintenance windows across a 200-unit fleet.

Data Quality Monitoring & Anomaly Detection System | Python · Isolation Forest · SQL

- ▶ Built Python monitoring framework using Isolation Forest + statistical controls to automatically detect anomalies, missing values, and schema violations across 10+ reporting datasets.
- ▶ Automated data-health tracking across multiple reporting cycles, reducing analyst time on manual data QA by ~5 hours/week.

EDUCATION

M.Sc. Web & Data Science

University of Koblenz, Germany

Machine Learning and data Mining, Data Science, Artificial Intelligence, Big Data, Network Theory and Dynamic Systems, Web Science, JAVA Web EE, Engineering Web and Data Intensive Systems

April 2025 – Present

GPA: 3.0

Computer Science and Engineering

Ahmedabad institute of technology, India

Database Management Systems, Python for Data Science, Machine Learning, Artificial Intelligence, Advanced Java, Database Management Systems, Data Structures and Algorithms, Cyber Security

Oct 2021 – May 2024

GPA: 1.6

CERTIFICATIONS

- ▶ Google Data Analytics | Issuer: Google | Year: 2024
- ▶ Power BI Data Analytics | Issuer: VNSGU | Year: 2024
- ▶ IBM Python for Data Science and AI | Issuer: IBM | Year: 2023
- ▶ Data Manipulation in Python (NumPy, Pandas) | Issuer: Udemy | Year: 2025
